SUMMARY

AI/ML engineer with a B.Tech in Artificial Intelligence and Machine Learning, focused on building complete systems rather than notebooks: data curation and preprocessing pipelines, transformer-based information extraction, evaluation using precision, recall, F1 and error analysis, and containerized deployment behind Flask APIs. Comfortable with raw, incomplete and inconsistent data. Seeking an AI/ML engineering internship in NLP, search, entity resolution and document intelligence.

TECHNICAL SKILLS

Languages and Core: Python, SQL, Git, Linux

AI and ML: Transformers and LLMs, NLP, Information Extraction, Text Normalization, Neural Networks, CNNs, Classification, Regression, Clustering

Frameworks and Libraries: TensorFlow, Scikit-learn, Flask, NLTK, SHAP, Pandas, NumPy, Matplotlib, Seaborn

Evaluation: Precision, Recall, F1, ROC-AUC, Confusion Matrices, Error Analysis, Threshold Selection, SHAP

Deployment and Tooling: Docker, GitHub Actions (CI), Render, Netlify, MySQL, Jupyter, Colab

EXPERIENCE

AI/ML Intern, Teknowgrade Pvt. Ltd. | Dec 2025 - Jan 2026

- Built automated preprocessing and feature extraction pipelines over real-world datasets, normalizing inconsistent and incomplete fields before training
- Trained and evaluated models with Scikit-learn and TensorFlow, instrumenting loss and accuracy tracking to compare runs and diagnose underperforming configurations
- Integrated trained models against live production data and automated build/version-control checks across team repositories using GitHub Actions

PROJECTS

Construction ERP Platform (Property and Project Data) | React, Tailwind, JavaScript

- Built and deployed a full ERP web application for a Bangalore turnkey residential construction business, digitising a workflow previously run on paper and spreadsheets
- Modelled property, project and vendor records across an 11-stage construction lifecycle, from marking and CAD to handover, with stage-wise approvals and payment schedules
- Designed role-based access for admin, client, vendor, worker and site engineer; implemented document management and reporting across materials, labour, expenses and payments; deployed at deva-demo.vercel.app

AI Code Documentation System | Transformers, LLMs, Python, Flask, NLTK, AST

- Built an information extraction pipeline parsing raw source files into structured entities (classes, functions, variables) via AST analysis across multiple languages
- Integrated transformer-based sequence models to generate contextual natural-language summaries from the extracted structure, output as HTML, Markdown and PDF through a Flask interface; deployed at code-doc-generator-gj97.onrender.com

Customer Churn Prediction Service | Python, Scikit-learn, SHAP, Docker

- Benchmarked logistic regression against a random forest; evaluated on ROC-AUC and minority-class recall, reaching 0.84 ROC-AUC at 80% recall on churned customers
- Used SHAP attribution to trace predictions back to input features and convert output into retention recommendations
- Containerized with Docker and deployed publicly at customerchurn-ckt.netlify.app

EDUCATION

B.Tech, Artificial Intelligence and Machine Learning | Nov 2022 - May 2026

BGS Institute of Technology | CGPA: 7.5 / 10.0

Relevant coursework: Machine Learning, Deep Learning, NLP, Computer Vision, Data Analytics, Cloud Computing, DevOps

ACHIEVEMENTS AND LEADERSHIP

- Organized 24-hour hackathons, led Coding Club initiatives in AI and cloud, and mentored junior AI/ML teams on project development and deployment
